The City of Durango, Colorado to Implement Municipal Software's CityView® System

Municipal Software Corporation, a leading developer of local government business process automation software and a wholly owned subsidiary of Municipal Solutions Group, Inc. (CDNX: MSM), announced today that the City of Durango, CO has purchased CityView® to automate their Building and Inspections, Code Enforcement and Planning functions. The project is valued at about \$44,463US.

The City has chosen to implement Municipal Software's "best practices" modules to provide the backbone of their building, planning and code enforcement automation. They will also be getting some additional customization to allow these modules to provide a better match to their own business processes. The City staff will undergo a 2-day User Review that will detail the types of changes they wish to make. Some of these changes they will contract Municipal to perform, while others they will implement themselves, using CityView's built in process automation tools.

One of the benefits to the City purchasing CityView will be its ability to share some data with the County more easily, as La Plata County is also using CityView for a number of business processes.

The City of Durango is located in La Plata County about 220 miles southwest of Denver and about 25 miles east of Mesa Verde National Park. It has a population of about 13,000.

Rob Bennett, President of Municipal Software commented, "We are pleased to have the City of Durango as a CityView client. Durango is now our fourth client in Colorado. We are looking forward to a successful implementation and hope the City will expand its use of CityView into other areas such as GIS and the Web."
