City of Evansville selects CityView PreBuilt solutions from Municipal Software

Victoria, British Columbia, March 29, 2005—Municipal Software (TSX-V:MSM) is pleased to announce that the City of Evansville, IN has purchased CityView PreBuilts to meet the city’s immediate need to automate a range of business processes and offer the best possible service to citizens. According to Evansville’s Chief Information Officer Matt Arvey, “The CityView solution was the unanimous choice of our review committee because it’s easy to use yet flexible enough to grow with us. We need to streamline business processes while providing new and improved e-government services internally and to our citizens and CityView will allow us to do this.”

Based on 23 years of best practices by more than 140 local governments across North America, CityView PreBuilts will automate the City of Evansville’s permitting, planning, commercial site review, inspections, code enforcement, complaint tracking, work order management and contractor licensing processes. Building Commissioner Roger Lehman explains that thanks to this purchase, several city-wide goals will be met including the need to “provide online access to information and provide the public, including contractors, with the ability to transact business electronically. We will be able to improve response time to citizen complaints, provide rapid communication between inspectors and contractors, communicate information on specific projects between government agencies and reduce staff time spent on paper work.”

Rob Bennett, President and Founder of Municipal Software, says that “this purchase illustrates Evansville’s commitment to lowering costs while at the same time delivering the best service possible to their citizens. I know that the citizens of Evansville will appreciate the online access to information, the quick responses they’ll get from city hall and the fact that the city can offer such services despite all too familiar budget constraints.”

The city will also purchase CityView Application Builder from Municipal Software, a powerful set of application software development tools. According to Mr. Arvey, one of the main reasons for selecting both CityView PreBuilts and CityView Application Builder, was the fact that “CityView offers both a quick solution and a set of application development tools that will give us the power to develop, customize and maintain existing and future applications ourselves. This will reduce outside consulting costs and increase our return on investment, which means an enormous savings to our taxpayers. And, thanks to CityView, the ease with which we can develop Web forms will help us immensely with providing the access to information the public demands.”

It is essential to Evansville that they purchase software that will grow with their organization. CityView Application Builder will allow them to make changes to the CityView applications they have and also create unique applications to meet their future needs. As Bennett notes, “Evansville realizes the potential for a long-term investment that ultimately saves them money and time. They know that CityView will adapt to their ever-evolving business process needs.”
