LOCAL GOVERNMENT MANAGER ADDS NEW CODE ENFORCEMENT MODULE

Victoria, BC, February 15, 2007 – Municipal Software (TSX-V:MSZ), a provider of business process automation solutions for local government, today announced the addition of the Code Enforcement module to its Local Government Manager solution.

“We are very excited to be adding a new module to the Local Government Manager solution this soon after the initial product launch”, said Iain McLean, CEO and President of Municipal Software. “We have had such positive feedback from our clients for the permitting and inspections module we released last fall that we proceeded with developing the code enforcement module sooner than planned”.

Local Government Manager was developed by Municipal Software for municipalities that require a low-maintenance, configurable, ready-to-use solution. The new module for tracking code enforcement cases from complaint to resolution is fully integrated with the existing module to manage all critical permitting and inspections functions.

As an on-demand software solution, Local Government Manager is easy to implement as resources do not have to be dedicated to installation and maintenance, no capital investment is required, upgrades are provided automatically and users can be up and running in weeks. The Apex™ platform used by Local Government Manager is world-class and delivers a secure and reliable service for local jurisdictions.
