

# CityView

## Cashiering

CityView Cashiering guarantees that accurate, correct revenue collection is no longer an ongoing challenge, it's just a matter of inputting the data into the system.

**Manage your revenue** in a central location for all your land management and licensing initiatives. Seamlessly integrated with all CityView modules, CityView Cashiering autogenerates and autologs transaction numbers, receipt numbers, payment date and payment receiver to create an audit trail of monies received.

**Easily set up and change your fee structure** to meet your exact requirements and set automatic fee activation and expiry dates. CityView automatically calculates and populates the required fees depending on the application type, eliminating manual entry and calculation errors.

**Meet all standard cashiering expectations** by splitting payments into multiple payment methods or joining them into a single transaction or reversing, refunding and voiding transactions as required. Update all applications, permits, citations and licenses with fees payment information like payee and receipt.

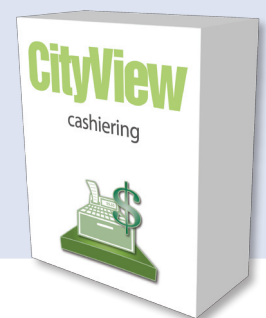

**Understand your revenue** with reports that for example, detail all payment transactions for a given time period by account, like Building Permit Fees, or by payment method. Browse payment history and export transaction batches into your accounting system.

### Why use **CityView**?

CityView is a highly configurable software solution that manages the everyday business processes of local government. With over 25 years of experience and 150 clients, CityView is built on the best practices of leading jurisdictions to automate and manage your Property, Permits & Inspections, Planning, Code Enforcement, Licensing and Cashiering activities.
